**Twaron®**

The power of Aramid

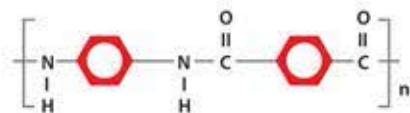

Twaron is Teijin Aramid's flagship para-aramid, a high-performance man-made fiber. Offering well-balanced performance in terms of mechanical properties, chemical resistance and thermal stability, it is widely recognized in many industries as an extremely valuable component with excellent durability. Our experience of more than 30 years, not only guarantees a technically mature product, it is also the basis for developments – often in close cooperation with our customers to tailor Twaron to the specific requirements in various applications.

Twaron is suitable for a virtually unlimited range of challenging applications, including ballistic protection, heat and cut protection, the oil and gas industry, the automotive industry and optical fiber cables to name just a few of its many uses.

Twaron combines the following characteristics, which distinguishes it from other synthetic fibers:

- High strength (excellent strength-to-weight properties)
- High modulus
- High dimensional stability
- Excellent heat, cut and chemical resistance
- No melting point
- Low flammability
- Non-conductivity

These unique characteristics are the result of a 100% paracrystalline structure with molecular chains preferentially oriented along the fiber axis.

A PLEASURE TO WEAR

LEVEL 1: Minimum result  
LEVEL 2: Good result  
LEVEL 3: Very good result  
LEVEL 4: Excellent result  
LEVEL 5: Excellent (where applicable )  
LEVEL X: Test not required or glove not tested

0 to 4: Abrasion  
0 to 5: Blade cut  
0 to 4: Tear  
0 to 4: Puncture

## Glove Standards Explained

### Mechanical Hazard Protection EN 388

This test applies to all gloves with a need  
To protect against Abrasion, Cutting, Tear and Puncture.  
All the tests are made under strict laboratory conditions.  
Although this allows you to make comparisons between  
Gloves it does not replace the actual testing under real  
Conditions.

Test	Performance				
	1	2	3	4	5
Abrasion resistance (Cycles)	100	500	2000	8000	
Blade Cut Resistance (factor)	1.2	2.5	5	10	20
Tear resistance(newton)	10	25	50	75	
Puncture Resistance (newton)	20	60	100	150	

### Heat & Fire Hazard Protection EN407

This test applies to the general requirements and  
Thermal performance of gloves to protect from heat  
And fire. That is Burning behaviour, Contact heat, Convective Heat,  
Radiant Heat, Small or Large Molten metal splash.

LEVEL 1: Minimum result  
LEVEL 2: Good result  
LEVEL 3: Very good result  
LEVEL 4: Excellent result  
LEVEL 5: Excellent (where applicable )  
LEVEL X: Test not required or glove not tested

0 to 4: Burning  
0 to 5: Contact Heat  
0 to 4: Convective Heat  
0 to 4: Radiant Heat  
0 to 4: Small Molten splash  
0 to 4: Large Molten Splash

These tests tend now to come under  
the banner of EN12477

Test		Performance			
		1	2	3	4
After burn time	SECONDS	<20	<10	<3	<2
AFTER GLOW TIME	SECONDS	Infinity	<120	<25	<5
Contact Heat	Temp in C after 15 seconds	100	250	350	500
