3M™ Cubitron™ 3: Flap Discs, Slitting Discs & Fibre Discs

Cubitron™ 3
Performance Abrasives

3M™ Cubitron™

3M™ Cubitron™ 3 1169F Flap Discs, Grades 40/60/80+

3M™ Cubitron™ 3 Flap Disc 1169F is one of our highest-performance abrasive disc built for versatility and value.

The 3M Cubitron™ Flap Disc 1169F delivers fast, long-lasting abrasive performance with precision-shaped grain that cuts cleaner and lasts longer than conventional flap discs. Perfect for metal finishing and prep work across a wide range of jobs.

Features:

- Engineered with 3M Precision-Shaped Grain for faster cutting and extended life.
- Consistent cut-rate throughout use – individual flaps continually expose fresh abrasive.
- Versatile for weld grinding, beveling, deburring, blending, and surface prep.
- Ideal on carbon steel, stainless steel and other heat-sensitive alloys.

**Up to more
82% material
removed**

compared to a leading competitive AZ flap disc

Powered by 3M re-engineered precision-shaped grain technology.

**Up to faster
sustained
85% cut-rate**

compared to a leading competitive AZ flap disc

3M™ Cubitron™ 3 Slitting Discs

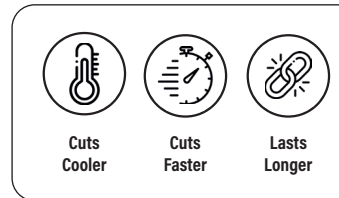

Portable Grinding and Cut-Off Wheels

3M™ Cubitron™ 3 Portable Grinding and Cut-Off Wheels are engineered for fast, efficient cutting and grinding performance across a wide range of metalworking applications.

Designed for durability and consistent results, they help maximise productivity while maintaining control and precision on the job.

Features:

- Fast, smooth cutting performance for metal fabrication and maintenance work.
- Durable construction for extended wheel life and reduced changeovers.
- Designed for use on portable grinders for flexibility on-site or in the workshop.
- Suitable for cutting and grinding carbon steel and stainless steel.
- Engineered for consistent performance and dependable results.

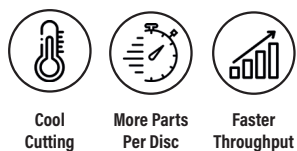

3M™ Cubitron™ 3 Fibre Discs

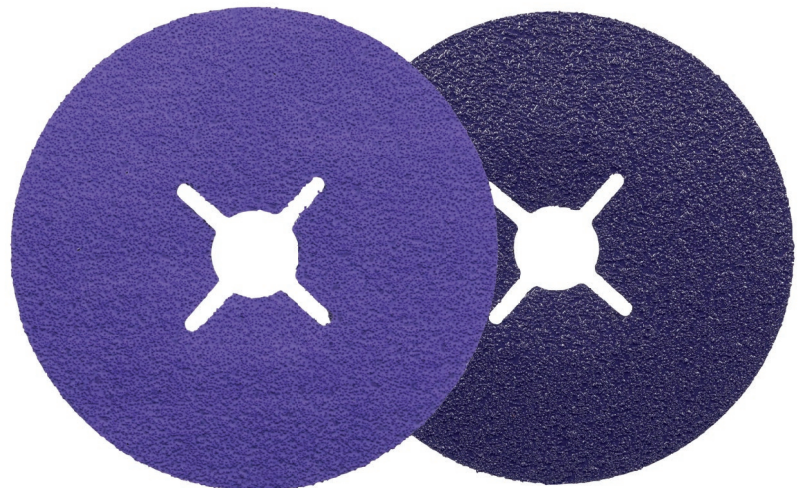

3M™ Cubitron™ 3 Fibre Discs 1182C, 36+ and 1187C, 36+

The 3M™ Cubitron™ 3 Fibre Discs 1182C and 1187C in 36+ grade are engineered for high-pressure grinding applications where speed, durability and consistency are critical. Featuring 3M's re-engineered Precision-Shaped Grain, these discs are designed to deliver exceptionally fast cut rates and sustained material removal throughout the life of the disc.

The 1182C is optimised for carbon and mild steels, while the 1187C includes a grinding aid, making it ideal for stainless steel and other heat-sensitive alloys. Both discs are built on a strong fibre backing to withstand demanding tasks such as weld removal, heavy stock removal and beveling in fabrication and industrial environments.

- **Next-level cut rates** – Faster initial and sustained cutting compared to previous Cubitron™ II fibre discs.
- **High material removal** – Ideal for weld grinding, beveling and heavy stock removal.
- **Cooler grinding performance** – Helps reduce heat build-up and discolouration on stainless steel.
- **Durable fibre backing** – Designed for medium-to-high pressure applications.
- **Longer disc life** – Self-fracturing grain maintains sharp cutting edges, reducing changeovers and downtime.
